Consult Note by Morgan Exemplename, MD at 3/4/2025 1:20 PM

Reason for Consult

Acute hepatocellular injury with rising bilirubin.

Assessment

Pattern is hepatocellular. Drug or supplement induced injury is most likely given timing. Autoimmune hepatitis remains on the differential with elevated IgG pending confirmation. ANA negative does not exclude it. Will send smooth muscle antibody. Consider liver biopsy if bilirubin continues to rise or autoimmune markers return positive.
