

CT Abdomen Pelvis with IV Contrast

Collected on Mar 4, 2025 10:15 AM | Result date: Mar 4, 2025 1:05 PM

Ordering provider: Dana Placeholder, MD | Resulting lab: Example General Core Lab

IMPRESSION:

- 1. Hepatomegaly with heterogeneous, mosaic enhancement of the liver parenchyma.
- 2. The hepatic veins are not well opacified on this portal venous phase study. Hepatic venous outflow obstruction cannot be excluded. Recommend dedicated multiphase liver imaging or Doppler correlation.
- 3. Caudate lobe enlargement.
- 4. Small volume ascites.

NARRATIVE:

Exam performed: 3/4/2025 11:02 AM.

Specimen collected: Mar 4, 2025 10:15 AM
