

US Abdomen Complete with Doppler

Collected on Mar 3, 2025 8:02 AM | Result date: Mar 3, 2025 3:30 PM

Ordering provider: Dana Placeholder, MD | Resulting lab: Example General Core Lab

IMPRESSION:

- 1. Hepatomegaly (liver 19.2 cm) with coarsened, heterogeneous echotexture.
- 2. Hepatic veins patent with phasic flow.
- 3. No biliary ductal dilation. Gallbladder unremarkable.
- 4. Small volume ascites.

NARRATIVE:

Exam performed: 3/3/2025 2:40 PM. Indication: elevated liver enzymes, jaundice. Grayscale and color Doppler imaging of the abdomen. The portal vein is patent with hepatopetal flow. The middle and right hepatic veins are visualized and patent. The left hepatic vein is incompletely visualized due to body habitus.

ADDENDUM (3/4/2025 4:12 PM): Images re-reviewed at the request of the primary team in light of the CT performed 3/4/2025. The middle and right hepatic veins are again felt to be patent. The left hepatic vein remains incompletely visualized.
